Call Recorder Single II

The Call Recorder Single II product range has been designed for personal desktop use with most analogue, digital and IP phones. The recorder is specifically intended for people who need to listen to their own calls frequently.

There are two models

Flash 10, for occasional use

- Max. 10 hours recording capacity

HD9900, for comprehensive use

- Max. 20 700 hours recording capacity

Both models include:

- Automatic or manual start recording
- Extensive select and search function
- Network connection
- Internal speaker
- Answering machine functionality
- Announcing with voice message before recording
- Connectivity to other audio sources (radio, microphone)
- Direct marking of recordings (e.g. in case of threat)
- Direct playback on the PC from remote recorders

Options

- Optional Encryption
- Optional Call Recorder Access Software
- Optional Araña web interface
- Optional SD Interface, with SD card, Quick SD Access software enabling extensive search
- Optional Headset / Handset / Microphone

Encryption

The Call Recorder Single II is equipped with an IC Card reader. The recordings can be encrypted using the optional Crypto Card.

Without a corresponding CryptoCard and Pin code, the encrypted recordings cannot be played back. This is not only a professional way to protect the calls but is especially useful to protect the privacy of the people involved.
